

# OLA HAWAII PILOTS

Ola HAWAII Team-Science Pilot Projects Program is to provide modest funding on a competitive basis to early-stage and early-career investigators, post-doctoral fellows, medical residents and subspecialty fellows who propose meritorious research on the science of minority health and health disparities.

Grant funding is intended to support investigators pursuing promising pilot or preliminary research ideas to advance minority health that are likely to mature into larger federally funded, independent research in the future. Ola HAWAII also is committed to helping communicate research findings to community and policymakers.

Ola HAWAII is a federally funded Research Center in Minority Institutions (RCMI) NIH/NIMHD U54MD007601
