

PRESENTS:

Viral Hepatitis in HIV

Chuong Tran, MD

Transplant Hepatology at The Queen's Medical Center Liver Center | Assistant Clinical Professor, Department of Medicine, John A. Burns School of Medicine, University of Hawai'i at Manoa, Honolulu Hawai'i

MONDAY, DECEMBER 11, 2023 3-4PM | VIA ZOOM

OVERVIEW

HIV has a major impact on the natural history, progression, and prognosis related to hepatitis B virus (HBV) and hepatitis C (HCV) infection. HBV and HCV are viruses that infect the cells of the liver and can lead to cirrhosis, end-stage liver disease, or hepatocellular carcinoma. Data from the Centers for Disease Control and Prevention (CDC) estimates that about 21% of people with HIV in the United States also have HCV. About 5% to 10% of people with HIV in the United States are co-infected with HBV. In this webinar, we will discuss the screening and management of people with HIV co-infected with viral hepatitis.

For questions, please contact Amanda Allison

LEARNING OBJECTIVES

At the end of this presentation, participants will be able to:

- Outline the approach to patients coinfecting with HIV and HBV or HCV
- Summarize treatment and long-term management
- Demonstrate when referral to hepatology is indicated
